EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James A.O'Malley (45,952) on 9/2/05.

The application has been amended as follows:

IN THE CLAIMS:

In claim 9, line 1, "claim 10" has been changed to --claim 8--.

The above change to claim 9 has been made to correct claim dependency.

REASONS FOR ALLOWANCE

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent No. 6,490,962 to Schultz. The improvement comprises a hydraulic control mechanism with an adjustment assembly coupled to the housing having a valve chamber and a valve member positioned within the valve chamber, where in the valve chamber is in fluid communication with the central passageway and the cross passageway, the valve chamber defines a valve seat proximate to one of the central and cross passageways, and the valve member is displaceable within the valve chamber for the purposes of more easily operating the control mechanism in different modes.

Art Unit: 3745

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

PRIOR ART

The patent to Schultz is cited for the showing of a hydraulic control mechanism similar to applicant's but lacking a valve chamber defining a valve seat proximate to one of the central and cross passageways while being in fluid communication with the central passageway and the cross passageway.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of four patents.

Hall, Tatai, Becker et al, and Orth et al. are cited to show hydraulic control mechanisms with open and closed center selecting mechanisms.
